

Ultherapy: What Is It and Its Benefits

Michelle Harris | August 30

A HOT NEW TREATMENT CALLED ULTHERAPY IS A CELEBRITY FAVORITE TO KEEP SKIN LOOKING YOUNG AND FRESH!

Everyone wants firmer, more radiant skin! One of the things that keep our skin looking its best is lots and lots of collagen.

Ultherapy stimulates collagen utilizing the power of ultrasound. Most people are familiar with ultrasound but don't know it can benefit the skin! Ultherapy is the only FDA cleared treatment to lift the skin on the brows, neck, and chest (did you forget that sunscreen on your chest?).

The ultrasound is delivered into the deep layers of the skin, which the practitioner can see as it's being delivered. Once the treatment is done and as time passes, you will start to see the benefits from where the collagen has been stimulated.

I recently had the chance to try Ultherapy for myself at the practice of **Dr. Ava Shamban**, Ava MD in Beverly Hills.

Click this link to check out this segment from my television series, Alive & Well where I had the chance to try the treatment and speak with Dr. Shamban. My treatment took about an hour and it was quick and easy! My skin looked great and continued to look better over time! Thanks Ultherapy and Ava MD for helping me keep my skin looking its best!

The staff at Ava MD was incredible! The treatment was amazing and I loved the results! Take a look at some before and after photos from patients who have had the Ultherapy treatment:
